## PORTLAND

**Available starting May 21, 2018**

Martin's Point Portland Health Care Center  
331 Veranda Street  
207-828-2402

## What is 3-D mammography?

3-D mammography is a newer technology that details each layer of the breast tissue in a 3-dimensional image. These detailed breast images allow your doctor to better evaluate your breasts layer by layer. 3-D mammography has greater accuracy than 2-D mammography for women across a range of ages and breast densities. And, it's the only mammogram the FDA has approved as superior for women with dense breasts.

## What are the benefits of 3-D mammography?

- ▶ More accurate, earlier breast cancer detection.
- ▶ Reduces the chance of callbacks by 40%.
- ▶ Detects 20-65% more invasive breast cancer compared to 2-D mammography alone
- ▶ For some women, this could mean an earlier diagnosis and a greater variety of treatment options.
- ▶ The experience is comparable to a 2-D mammogram and takes the same amount of time.

## Will my insurance plan cover 3-D mammograms?

Not all insurance plans will cover 3-D mammograms. Please contact your insurance carrier and ask if your plan covers 3-D mammography.

## How will I receive my results?

The reporting of results will be the same as with 2-D mammograms. Your health care provider will mail you a letter with the results.
